Procesul de sablare a sticlei presupune “bombardarea” acesteia cu un jet de particule fine de nisip, cu efect de mătuire a zonei respective.

Sablarea sticlei se poate face uniform, pe toată suprafață sau parțial, cu variate modele florale, geometrice sau abstracte.

Suprafață opacă sau cu model decorativ sablat poate fi aleasă în funcție de destinația fiecărui geam, de gradul de intimitate dorit sau de nevoia de a personaliza interioarele. Pot fi înnobilate prin sablarea sticlei cu modele decorative atât uși, ferestre, paravane sau cabine de dus cât și oglinzi, blaturi de masă sau alte elemente cu suprafață plană din sticlă.

Zonele sablate pot fi tratate suplimentar cu soluții care ajută la protejarea contra petelor sau amprentelor, făcând mai ușoară curățarea și întreținerea lor.
